Technology The world's first product designed to teach AutoCAD, the AcUstiveCAD, began development in 1993 by a former student of Dr. Volker Wühr. It allowed learning AutoCAD in a highly customized manner, without the need for a PC. The software was released to the public on December 22, 1997, under the name "AcActiveCAD". The software was used by thousands of students around the world to teach them AutoCAD. Eventually, it was marketed by two different companies: AcActiveCAD Corporation (which developed the software) and Alteon Corporation. In 2003, Alteon Corporation changed its name to Indelgeo Corporation and stopped developing the software for the PC. Since then, the software was based on a technology called Dynamic software publishing. It allowed users to learn AutoCAD online without having to purchase a computer. The software could be run online or on a local computer. It contained all the material required for a student to learn AutoCAD. A learning center provided four learning methods (Excel, Web browser, other websites and physical classroom). Users could customize the learning center, in the form of a database. Each student would be able to create their own database. In addition, students could send each other information, as well as read other students' databases. Students could take tests and receive grades. The software could be upgraded, so that new features would be available to students, even if they were offline. In October 2004, Indelgeo Corporation announced its release of AcActiveCAD 4.0, which replaced the learning center with a new learning management system (LMS) from B2solutions, a US company specializing in educational software. AcActiveCAD 5.0 was announced in October 2010. It is based on a new learning management system from Thinking Objects, a German company that specializes in learning management systems. Features The software contains lessons, tests, quizzes, virtual labs and videos. Students could practice all types of knowledge, including the fundamental techniques, drafting rules, CAD-specific knowledge and AutoCAD applications. As of December 1997, the software contained 7,000 lessons, 300 quizzes and 400 practice tests. In November 2003, Indelgeo Corporation released AcActiveCAD 2.0, a Windows-based version of the software. In November 2004,

Neuroprotective effect of resveratrol on hypoxic-ischemic brain injury in neonatal rats. Resveratrol, a polyphenolic phytoalexin, has been shown to exert neuroprotective effects against a variety of central nervous system insults. In the present study, we examined the effects of resveratrol on hypoxic-ischemic brain injury (HI) in neonatal rats. Three-day-old neonatal rats were subjected to a unilateral HI model using a unilateral carotid artery occlusion followed by exposure to 8% oxygen for 2.5h. Resveratrol (50 and 100mg/kg) was administered intraperitoneally 30 min before HI and immediately after the end of hypoxia. A sham operation was performed in control rats, which received an equivalent volume of saline. A neurological evaluation was performed 24h after the HI insult. Brain damage was evaluated using 2,3,5-triphenyltetrazolium chloride staining. Levels of malondialdehyde (MDA), superoxide dismutase (SOD) and glutathione peroxidase (GSH-Px) were measured. Resveratrol ameliorated the neurological deficits of HI rats, significantly reduced the infarct volume and brain edema, and decreased the MDA and the production of reactive oxygen species (ROS) in the ipsilateral hemisphere of HI neonatal rats. The protein expression levels of caspase-3, Fas, and Fas ligand were also downregulated by resveratrol. These data suggest that resveratrol protects the brain against HI by attenuating oxidative stress and regulating apoptosis-related proteins. New features in the Standard toolbar: Create blocks, give blocks more complex dimensions, and customize views of blocks. Change block content properties in real time, interactively. Add a visual baseline to block and text objects. AutoCAD 2023 also adds compatibility for QuarkXPress, allowing for import of drawings from QuarkXPress files. New features in the Extensions toolbar: Free and charge gridlines, at any point along the design axis, so the layout has fewer restrictions. Make spline curves using grips or the B-spline tool and more. Draw projects with the included Draw tool. Use a drawing collection as a library with folders for groups and hierarchies. Improved features in the Commands toolbar: Three-dimensional objects can now be entered directly, from a file or web service, or from the history. Now draw SVG, a new XML standard for vector graphics, on the screen or as an image file. Improved contextual help: AutoCAD 2023 now includes improved content filtering and search. Update content with new CAD standards like DGN, UNICS, LEADTOOLS, and SVG. Generate a large collection of content right from the active drawing with new content browser. A table of contents can be used to navigate an entire drawing. Simplified import of other formats: Import and export of the most common CAD formats is simplified and faster than ever. AutoCAD also can import from and export to projects and websites in the browser. The New Features in the Draw toolbar: Create a custom graph paper and enter custom text in any coordinate system and at any scale. Create spline curves using grips or the B-spline tool, to make curved lines without creating more lines. With improved user interface and performance, the Draw tool can now be used to edit and create a wide variety of 3D shapes. The New Features in the Home toolbar: Create a custom paper space and enter custom text in any coordinate system and at any scale. Adjust the number of points per drawing unit and in real time, to create a custom grid for 2D drawings, plotting, and plotting. Use the new fitting tools to use paths to precisely control

3D transformations. The New Features in the Layers toolbar: With enhanced and simplified layer controls, new interactive features, and the ability to save layers to history, AutoCAD 2023
