KEYMACRO is a cross-platform, free, and open-source (GPL) keyboard macro utility that can easily be installed on your Windows, Linux, and Mac desktop. KEYMACRO allows you to define, save, and edit keyboard shortcuts using a simple text-based user interface. With the software's help, you can create a

shortcut for each task you perform using your computer and then easily assign keyboard shortcuts to those shortcuts. You can also set special actions to happen on certain events, like playing sounds or opening programs or documents. You can create custom keyboard shortcuts, by specifying what program to launch, what to run, and what to execute. You can also combine the shortcut with other events, such as executing a macro when a certain program is launched, activating a shortcut when a document is opened, and so on. To create a new shortcut, you enter the keyboard shortcut using CTRL-F

followed by the shortcut name, then press ENTER. You can then assign the shortcut to your desired program or action. Notes: [?] Requirement: Yahoo!
