Contents History Photoshop was originally developed by a company named Black Pixel for \$500,000, while it was under development at Condé Nast. After a merger with the World Color Press Company, the studio changed its name to Adobe and the company was purchased by Adobe Systems in May 1998. According to Cory Knowlton, a former developer for Black Pixel, the first Photoshop was released in 1990. Photoshop 1.0 was released in 1992. Adobe Photoshop was first released as an application bundled with Softimage, a commercial version of the 3-D animation software CINEMA 4D. Adobe dropped support for Softimage in 2011, rendering the entire version of Photoshop for Softimage obsolete. Softimage became part of Adobe Creative Suite 3, while Photoshop remained as a stand-alone product.[1] In 2002, Photoshop was released as a standalone application. To this day, Photoshop for Mac (released in 2009) is the only version released for the Mac platform, with Mac OS X 10.6 operating system support. In addition, the Mac version comes bundled with Elements, a free, full-featured, entry-level photo-editing program. Elements has been described as "Photoshop's little brother,"[2] and is marketed under the name Adobe Photoshop Elements.[3][4] In 2006, CS5 and CS5 Elements were released, leaving CS4 as the latest version available on the Mac.[5] Since 2014, Photoshop has been bundled with the new subscription-based Adobe Creative Cloud service, which offers users extended Photoshop features.[6] On November 8, 2016, Adobe announced that it was discontinuing Photoshop as a stand-alone program and would be available only as part of its Creative Cloud package.[7] Adobe says that the reason for discontinuing Photoshop as a stand-alone product is that the software's quality and features had not kept up with the software market, and that the decision was in the best interest of both consumers and Adobe. The program was still available for download from Adobe.com until November 13, 2016.[8] The decision came one year after Apple announced the discontinuation of the Mac App Store, which had been the only way to find old versions of Photoshop. Latest versions Adobe Photoshop CS6 (CC) is the current version of the software, with the CS being a version number and the CS indicating that this is the current version. There is also a 19.0.0 release

Q: JQuery mouseover not working for the first time I have the following code: var AllItems = S("#divItems"); AllItems.mouseover(function() { AllItems.css("color", "#AFAFAF"); }); var AllItems = S("#divItems"); AllItems.mouseover(function() { AllItems.css("color", "#ABBABA"); }); AllItems.mouseout(function() { AllItems.css("color", "#FFFFFF"); }); I want to change the color of a div's background to red when user hovers the div. Here, the color is changed only once and then stays the same on mouse hover. But, that's not what I want. I want the first mouseover to change the color to red and on subsequent hovers it stays red. Why is that happening? A: Try initializing on the document ready instead of in the mouseover function. Carbon nanotubes have been developed for use as additives and reinforcement in polymer matrix composites for many years (1-3). The carbon nanotubes, during this time, have been synthesized in various polymers, including poly(dimethylsiloxane), poly(styrene) and poly(methylmethacrylate), and have been mixed into the polymers in a variety of manners including dry blending, melt processing, solvent blending, and emulsion mixing (4, 5). The use of carbon nanotubes as filler, reinforcement, and as scattering centers in visible-light enhanced photopolymer photoresist for the production of microstructures has also been explored (6-13). The carbon nanotubes can generally be described as having a one-dimensional nanometer diameter (0.5-10 microns) and a hollow cylindrical structure. Often, the nanotube contents in the composites include an amount of surfactant. The surfactant is used to keep the carbon nanotubes dispersed in the host polymer and to provide lubrication for the extrusion process. Surfactants are also used because they stabilize the dispersion of the carbon nanotubes by generating a strong dispersion shear force sufficient to keep the nanotubes in suspension. However, the inclusion of the surfactant limits the
