Key Macro for Rapid Serial Peripheral Interface (RS232C) is a small utility that provides functions to send and receive keystrokes (press-to-send, send-wait, and send-then-wait) to and from a serial device attached to the computer. Key Macro (alternate name: key macro) is a small utility that provides functions to send and receive keystrokes (press-to-send, send-wait, and send-then-wait) to and from a serial device attached to the computer. For users who want to communicate with a terminal program that uses RS-232C for keyboard/mouse communication, they are supposed to use Key Macro. Key Macro is able to transmit multiple keystrokes to the serial port (RS-232C or other serial devices). This function has already been successfully used by software developers and users to transmit many kinds of commands to serial devices. Key Macro saves you a lot of time because you do not have to prepare data manually, and it has also been built with ease of use in mind. Key Macro has three main functions, key press, key-wait and key-then-wait. It also allows a user to copy/paste a block of data into the program (one keystroke for each block). Key Macro is an easy-to-use and powerful application that will help programmers and other users who have to write programs that use RS-232C or other serial devices for keyboard/mouse communication. Key Macro is a small utility that provides functions to send and receive keystrokes (press-to-send, send-wait, and send-then-wait) to and from a serial device attached to the computer. WebQuestionnaire - Business Survey Software With Research Factory makes web survey software that could generate web surveys in minutes. Surveys could be published on the web without programming. Surveys could be archived and organized into folders. Sale WebQuestionnaire - Business Survey Software With Research Factory makes web survey software that could generate web surveys in minutes. Surveys could be published on the web without programming. Surveys could be archived and organized into folders. @Jeffrey, I had to increase the subscription time to get it to work. Let me see if I can duplicate your problem. I've been using it for over a year now. This is really a great piece of work, I'd like to discuss a few minor details, though. 1. It would be nice if it could detect the correct MIME types. These are supposed to be specified in the survey itself. The easiest way to do this is to create a header file in your survey called Survey.h with the following line of code in it. Also, some of the library questions default to blank if the user doesn't answer the question. I'd suggest keeping this, and adding a "Please answer all questions" question at the end. 2. Finally, it would be nice to have an option to do a "free form" questionnaire. One option would be to allow the user to write whatever they want into a text field, and have the software automatically paste the data into the appropriate columns of a database. This would require that the software is able to read or write to a database. Either way, this would require that the software write to the database after the user submits the survey, and write the results to an archive file. Hi @alex, yes, sorry, it will be fixed very soon. Thanks for your suggestions. Your suggestion about "writing" data into a text field and automatically pasting it to database is already present in this version

What's New In Web Questionnaire?

Web Questionnaire is a neat software solution that allows you to create simple questionnaires and publish them on your websites, questionnaires are generated in HTML, without any PHP/ASP/JSP requirement. You can choose from 30 available HTML templates for creating great looking questionnaires easily. There's the option to choose and modify from dozens of built-in questionnaire libraries. You can save frequent used questions to library questions. It comes with question validation to ensure if specific question is answered correctly. Before using Web Questionnaire for the first time, some options need to be setup. You can set mail options for sending the invitation emails and retrieving of replies. For sending the invitation emails, SMTP servers or Exchange Servers are supported. WQ could decide what file format the questionnaire would be exported to. All in all, Web Questionnaire is a neat software solution that allows you to create simple questionnaires and publish them on your websites, questionnaires are generated in HTML, without any PHP/ASP/JSP requirement. There is a limited time sales offer on Web Questionnaire. Purchase Web Questionnaire now and get 50% discount. It's an awesome software and you can get it for \$59. By Marco Stiep (hr@mr-brains.de) This product could be great if it worked as advertised. I am able to connect to my Amazon MWS account and it connects. After I connect and do the initial update and before the questionnaire is generated, it never connects again. As soon as the questionnaire is generated it tries to connect again and then it does nothing. 2 years ago Posted by Hubert R. from Germany By Carlos (nrf-networks@comcast.net) Great solution for creating an Internet quiz. I like the fact that you can use the questionnaires that you have used before for one of your websites. 2 years ago Posted by John M. from United States I was able to download the file and it looks good. 2 years ago Posted by Mike S. from Germany I am having trouble connecting to my account and download the file. 2 years ago Posted by David W. from United States I am able to connect and download the file and everything is working great. 2 years ago Posted by Andrew M. from United States I do not have any problems with Web Questionnaire but, it would be very nice if it worked in IE10 and IE11. 2 years ago Posted by Erik M. from United States Web Questionnaire has no problems with IE 10 and IE11. 2 years ago Posted by Greg L. from United States I am able to download the file
