Analyzer Full Vehicle with Data Logger version's Ball Joint Wizard screen.Q: Swift how to update "readonly" UITableViewCell with userdata I'm new to iOS programming and Swift. I have an "readonly" UITableViewCell with a Default style. The "readonly" cell is displaying text that is fetched from web server. I can set the text, but I can't set any other user data for the cell. I've been trying to use the prepareForReuse() and dequeueReusableCellWithIdentifier() methods, but the cell being set as a cell with reuseIdentifier "TableViewCell", I am not able to update any user data. I'm stuck with this problem and don't know how to proceed. Any help? A: You should set the cell's data as well, just like you do with text. Something like this: cell.textLabel?.text = "You can't set cell data directly because it's readonly."
