EXPRESS: A set of automation tools for 2D drafting of engineering drawings. EXPRESS includes a drawing/drafting package, design tools, and project tools. All these are intended to be driven by a design specification and to produce a reusable design solution, which is time and cost effective. G-

InDesign: Adobe's major software package for the production of books, magazines, and other printed publications. InDesign has most of the functionality of a desktop publishing package. It is mainly for layout and design, although a great deal of functionality is shared with Photoshop. The software is most often used for producing physical books, but it is now also used for digital books, ebooks, magazines, newspapers, and greeting cards. The basic function of the program is to define a set of pages and arrange them into a content-structured design. The content is often divided into types of page elements such as the content, advertisements, and book elements. The program can print these elements to a physical format. Microsoft Project: A business planning and project management software package developed by Microsoft. It is designed to handle both business planning and project management. In 2018, Autodesk replaced the term 'AutoCAD' with 'AutoCAD Architecture and Design' in line with its new product portfolio.
