Introduction to Political Psychology.pdf Introduction to Political Psychology.pdf.pdf
Introduction to Political Psychology.pdf.pdf Introduction to Political
Psychology.pdf.doc Introduction to Political Psychology.pdf.pdf download Introduction
to Political Psychology.pdf.pdf freePregnancy alters dopaminergic and serotonergic
neurotransmission in the rat brainstem: effects of nicotine. Cigarette smoking during
pregnancy is a well-established risk factor for low birth weight and other maladaptive
outcomes in children. Previous studies have shown that smoking during pregnancy
alters expression of brainstem dopaminergic neurotransmission, with further findings
indicating that cocaine and nicotine, two abused drugs known to interact with the
brain dopamine system, have a more pronounced effect on fetal brainstem
dopaminergic neurotransmission in pregnant than in non-pregnant animals. The
present experiment tested the hypothesis that similar effects would be observed in
the serotonergic systems of the brainstem. Animals were treated daily with nicotine
(0, 0.4 mg/kg) from gestational day 4 to 18. On gestational day 18 (i.e. 3 days after
the last dose of nicotine), rats were injected with [3H]5-HT, a marker for serotonergic
terminals, and killed 90 min later to allow for adequate tracer uptake and
accumulation. Biochemical and histochemical analyses of the in vitro
autoradiographs were used to measure [3H]5-HT uptake and binding. The results
show that pregnant rats treated with nicotine had a lower density of [3H]5-HT in the
nucleus raphe obscurus, which, together with previous findings in the nigrostriatal
and nigral systems, suggest that the fetal brainstem serotonergic system is relatively
vulnerable to the effects of prenatal nicotine. In addition, pregnant rats treated with

nicotine had lower density of [3H]5-HT in the ventrolateral caudal periaqueductal gray and had lower levels of [3H]5-HT in hippocampus, cortex, amygdala and other brain areas. These effects suggest that prenatal nicotine may have a more widespread impact on the fetal brain than has been previously shown for cocaine. The present results complement the previous findings in the dopaminergic systems of the brainstem and demonstrate that the serotonergic system of the fetus is also vulnerable to prenatal nicotine exposure. The link is to my Twitter account. I'm not here to sell you anything, lol. When I know that things need to
