What's new:

Latest changes can be found on the forums. Hi! I'm working on a survival mod for ya and was wondering if you have any advice on which savedata sizes would be ideal? I have figured out how to set the created folder to my drive H:/ instead of the standard G:/ (i.e. All savedata is now on the C: drive as configured through the mod itself) but I'm curious if others are aware of doing this for them selves? Downloads are available on the forums. Please note: I made this mod for the Steam version of Oblivion. I'm not sure yet whether this savesdata will work for any future versions of Steam. If you experience issues with the mod not working for some reason, please open a Steam support ticket. Hi, I have been playing this server for about 3 months now on my second account, I just recently bought a Realm so that I can move around on my own like a man. In the tradition of the original game I was hoping you can support a Realm rival's guild: I'm considering modifying a small character sheet I made and trying to add it to the Realms guild. I am having a hard time trying to determine if there is a default format for what would need to be changed to make this work. Hopefully an experienced manager can see if this is possible and maybe implement it for public use. All of the money related work has been based on these metrics. Obviously the number one goal here is to make it impossible to accidentally spend any money on the server. The second priority goal is to create an economy where the freeloaders feel like they are getting short changes on whatever they are doing. Josh "OpTicJosh 'JW" Whittington and James "Clayster" Eubanks are ready to show us what they can bring to the CT side of the field. The two-time world champions and one-time IGL titles were crowned CT Doubles champions in the 2018 ECS Season. ESL has announced the 2019 Philadelphia Major Qualifier. This event will feature eight teams and while some of the top teams in the world are certainly not eligible, ESL has said that they will take eight determined teams into the event and will choose the winner of the preliminary Bo3 series.

One uploads a file and the other listens for responses. The listener (after uploading) never fires but the upload never returns an error message. Below is the code: var express = require('express'); var app = express(); var Server = require('http').Server; app.get('/', function(req, res) { res.send('Hello World!'); }); app.post('/upload', function(req, res) { let fd = fs.createWriteStream('./upload/test.mp3') let data = fs.readFileSync(req.files.myFile.path); data = data.toString(); fd.write(data); fd.end();
