Foto Driver: CDM 1.8.0 was released yesterday, with the new Foto driver. It has fixes for 2 out of the 4 major issues that were found when testing Foto Driver 2.1.2, namely: Overly bright and/or too dark images. The only change in the Foto driver is a change in the Foto::YUV and Foto::LUMA_BG2MASK methods. The new behaviour should be the same as the new code in Foto in the 2.1.2 build. This driver can be installed by registering a key on /Dev/v3/Hardware/Plugins. RAR HARDWARE: PAC engine 1.29 was released yesterday, with the new RAR engine. There are 2 changes, only one of which is significant. Changes: 1. The RAR parser now uses the fix for 64-bit files that was introduced in RAR 5.0.1. 2. The RAR engine now honors the -scfx+size parameter of the extract operation. This is a change that is a bit late, but is not that hard to make. Both changes should be the same as in RAR 5.1.1. This new version can be installed by registering a key on /Dev/v3/Hardware/Plugins. Versions 2.2.0.1010, 2.2.0.1020, 2.2.0.1024, 2.2.0.1030 have been released. Deluxe 2.3.2.0.10241 is the latest version. It fixes more bugs than I am aware of, but I think the only one major bug fix is in Silhouette CreateÅ Once the new version is installed (using either an updateÅ Next it could be that I wonÅ ever write another update (so far: 1 version per month), so if you upgrade right away, thereÅ a chance that you will be updated to a beta version.It is a very good idea to always keep up to date with 2.3: FotoDriver 2.1.3 was released yesterday, with the new Foto driver. It has fixes for 2 out of the 4 major issues that were found when testing Foto Driver 2.1.2, namely: Overly bright and/or
