Stroke represents one of the most common medical emergencies in a community hospital and is often managed incorrectly by emergency

physicians. In this article, the benefits of and barriers to thrombolytic therapy for acute ischemic stroke are addressed, as well as the rationale for the additional prophylactic use of antiplatelets for all patients who have experienced ischemic stroke. Finally, the use of intravenous thrombolysis in conjunction with hemorrhagic complications is reviewed. In the treatment of acute ischemic stroke, the traditional approach is to assess the patient for hemorrhagic or thromboembolic complications prior to treatment. This article reviews the assessment of these complications in the emergency department (ED) setting./* * Copyright (c) 2012-2015
