NET Core: Building.NET Core Apps. NET Core: What is.NET Core? Is there a candidate gene or genetic locus for obsessive compulsive disorder? A review of the literature. The search for a candidate gene or genetic locus for obsessive compulsive disorder (OCD) has been a high priority for researchers since the first association between OCD and familial OCD was discovered over 25 years ago. Despite research in many areas (e.g., pharmacology, imaging, genetics, and behavior genetics), no major genes have been identified to date in OCD, although loci have been mapped. This article summarizes and critically evaluates the most significant genetic studies performed to date in OCD. The analysis reveals evidence of association between OCD and a number of genes or chromosomal regions including serotonin receptor genes, dopamine receptor genes, glutamic acid decarboxylase genes, catechol-O-methyl transferase genes, and the serotonin transporter gene. The implications of these findings
