“HyperMotion Technology also increases the fidelity of player controls and adds a new dimension to the on-ball player animations,” explains Creative Lead on Fifa 22 Free Download, Andy Young. “In other words, we can now create better, more realistic animations for the player when they’re interacting with the ball.” Ad The new capabilities include Face Lift, which uses independent editing tools to significantly improve the appearance of players, the ability to make faces muscles more expressive, and full body collision. The on-ball animations have been extensively improved with new player poses, sprint animation, jumps, and new spin effects. New tactical animations have been built for passing, dribbling, shooting, off-ball runs and physical challenges, and the ball can now be pinned when defended. The on-ball player animations also includes a new playing style indicator. This visual element indicates the player’s preferred playing style and helps create a more accurate view of how the player will play. The player’s style can be modified through training. You can view more gameplay in the video below or by downloading the free demo. Keep in mind, the demo is only open to North American customers as the game won’t be released in Europe until December.
