Translation Since its release in 1993, AutoCAD has been translated into many different languages, mainly in North America, Europe, South America, and Asia., the following languages have translations in AutoCAD and a community website for translation of the user interface: Automation AutoCAD offers a rich set of interfaces and procedures for programmatic automation. All actions in AutoCAD are carried out using methods. These methods are invoked through a scripting language called AutoLISP. Although at first glance AutoCAD seems to be closely integrated with AutoLISP, there is a large body of useful, general information on both AutoCAD and AutoLISP in the AutoCAD User's Guide. Actions in AutoCAD may be automated through the use of scripts (macros) written in AutoLISP. These script files can be written in AutoLISP using any of the standard programming languages and syntaxes. A common approach is to create a script file in a popular programming language such as AutoLISP or Python, and then run the code through a command interpreter such as Python or AutoLISP. Using a scripting language and a command interpreter, users can automate many AutoCAD tasks. Using the Application Programming Interface (API), or simply calling a method, an AutoLISP script can be programmed to perform many different AutoCAD operations such as loading a file, exporting a file, creating a new drawing, converting polygons to line segments, creating a layer, unloading a drawing, and so on. Scripting in AutoCAD is further enhanced by the use of ObjectARX. ObjectARX is a COM interface for object-oriented programming in AutoCAD. It is available as a free and open-source option for the Autodesk Exchange Apps store. It provides a set of tools and interface to write and execute programs in C++ or C#, and to generate AutoCAD files. The scripting language of AutoCAD is used both to customize the user interface and to automate many different aspects of the operation of the product. The interface elements of AutoCAD are called control sets. Control sets represent controls (e.g. dialog boxes or toolbars) that are displayed on screen, and can be placed, and moved, resized, hidden, and so on. Control sets may be modified to contain custom graphical elements such as custom controls. Control sets are typically created through the use ca3bfb1094
