Given a list of URLs of both social networks, I have to extract the title, text, and a numeric code (Facebook) or both names (Twitter) of the page. Which are the resources that I have to scrape these two feeds? PS: I have access to both code, so I would be able to copy the regex pattern Thank you! A: The 404 error on Google results tells you that the page you requested doesn't exist on that site. If you want the page with your search results, you need to search for it on the Google search results page. Acquisition of chicken collagen type I by fibroblast cells. In this study, the ability of chicken connective tissue cells to synthesize and secrete collagen type I was studied. In vitro cultures of fibroblast cells obtained from the foot dorsum and eyelid of chicken embryos (7-10 days old) synthesized and secreted collagen. This result was confirmed by the detection of collagen type I in the culture medium using monoclonal antibodies. The synthesis and secretion of collagen type I by chicken skin fibroblasts was greatest in the first 24 h of cultivation. During the subsequent period, the level of collagen synthesis and secretion decreased. The effects of ascorbic acid, dexamethasone, insulin and cholera toxin on the synthesis of collagen type I were assessed. The incubation with ascorbic acid inhibited the synthesis of collagen, while the addition of dexamethasone did not. Insulin and cholera toxin stimulated the synthesis of collagen type I.
