**> Q: Php remove whitespace - from left in string I have a variable that contains a string with a lot of whitespaces from the left. I know that I can remove or trim only part of this whitespace string, but I have a lot of them that I don't know how many and I need to remove all from the left until to find "Not Implemented" or message. Example: \$string = "" + " Some other string here" + ""; So far I have remove the whitespace only from the right side. \$string = str\_replace(" ", "", \$string); This look like right, but I need a solution for the left side of this whitespace or a function that trims it. **1. Technical Field The present invention relates in general to a method and system for data processing and in particular to a method and system for data processing instructions within an integrated circuit design. Still more particularly, the present invention relates to a method and system for data processing instructions within a programmable logic device. 2. Description of the Related Art It is well known in the art to use a programmable logic device (PLD) to perform a variety of logic functions. For example, PLDs are typically used to implement complex combinational logic functions in various circuits such as microprocessors, digital signal processors, application specific integrated circuits (ASIC), programmable logic arrays, and so forth. PLDs typically include several logic blocks arranged in rows and columns. Each logic block typically includes many lookup-tables and a number of programmable and erasable elements. The lookup-tables are used to store output signals from combinational logic programs. The programmable elements are used to define the particular combinational logic function to be performed.**

In order to obtain accurate data, it is necessary to have an accurate knowledge of the mass of liquid that flows through the system at the desired flow rate. As a means to achieve this end, it is known to utilize a flow meter to determine the mass flow and to calculate the pumping volume. A flow meter operates by measuring the flow rate and differentiating this flow rate to obtain a measurement of mass flow. It is known to utilize flow meters which include a transducer that measures the velocity of fluid flow. This velocity is measured by means of a turbine whose rotation is mechanically linked to a magnet or coil that are made to rotate with the turbine. Alternately, the
