to argue. I'm not interested in a postmortem. I don't want to explain or justify myself to anyone. To me, most emotions are like online trolls, preying on a weak mind. If I were to articulate, I would only be convincing myself that I had the perfect perspective, when in fact, I don't. If I were to take a side and justify that choice, I would be allowing a pseudo-mockery to gain ground, as if I were dumb or stoic or naive. And none of us are that. We're all flawed. However, I can be vulnerable. I can be honest. I can share parts of my experience that I don't often see in my life, or even hear in my friends and family. Life is painful. It has pitfalls and joys, and when you're young, the joys are much higher than the pitfalls. Life is difficult. It requires work. In the words of James, that work produces patience. It's humbling and it's inspiring. It exposes your weakness and it builds you. You could write a thousand pages about your experiences, and the beauty and the pain and the joy. But the goal isn't to write a memoir. The goal is to

share your experience and your insight, and to give others a hope that reminds them of their own. That's what I'm doing. All posts are on the site now. Click on anything to read it. Life is a mystery. And the mysteries that we're unable to solve are really the only ones that we can't solve. It's unsatisfying, frustrating and totally worth it. There are two kinds of people in the world: those who acknowledge that they're not getting the answers they want, and those who try harder.

I've found a lot of useful information on how to connect to a server, and retrieve data from it, however I have yet to find the answer to this question. I have a .Net (net 3.5) socket object that I am attempting to convert into a string that I can save to a file. So far all I have for the string is this: `string strData = _strSock.ReadLine();` How do I convert this to a string? I would prefer that the string contain the full contents of the socket since I would be able to work with that string directly (not having to use a text

The descriptions are from their official website. It seems it's rewritten a little bit, but the general idea is the same. Are there any more risks? Is the download part legit? What is the performance like? Will it work on Windows 10? Because you go to a Denuvo-shielded page, get a Denuvo-signed executable file, and are asked to download a Denuvo-protected archive. And the archive cannot be unpacked. Things get complicated for us, because we do not know if this is part of the installation process or just a workaround. Is this like Zone of the Enders? From what I've read on the website, that's the comparison most people are making, but I've never played or seen ZOE. So I'm kinda at a loss. You can use their installation guide, and try to do the following. It basically is just the same. Does their installer run as administrator? Does it have an appropriate license in the license.txt file? Are there any other bundled files that are not necessary? Then you extract the archive and install the games normally, if it has no errors. If you
