In addition to being a CAD system, AutoCAD is also a top-rated vector graphics application, and is a powerful vector graphics application in the technical and construction market. The software offers a wide range of productivity tools, including features for digital media creation and file management. AutoCAD 2009 is the latest version of AutoCAD and has been released on December 10, 2009. AutoCAD 2009 offers some new features. The most important new feature is: the ability to export CAD

---

objects directly to Adobe Flash. You can use Flash to upload your files to websites or share them with others. For example, you can upload your designs to Share-it, a website where users can view and comment on your designs. The following AutoCAD 2009 features are discussed below.

**XRef Support** XRef (also known as XRef-R) is an Acronym for Exchangeable Reference. It is a way to exchange objects and components between applications. For example, if you put a component in the drawing (component). You can tell AutoCAD 2009 to automatically

---

send that component information to other CAD applications that you are working with. For example, if you open a drawing in Inventor, the Inventor drawing is automatically linked with the component in the drawing. In the same way, if you open a drawing in another drawing application, the component information is automatically sent to the drawing opened in that application. When creating a file you can define what objects will be sent to other applications (AutoCAD 2009 by default sends what is called a Smart Link to other applications). When you create a file, you can

---

specify: The objects you want to be sent to other applications (Smart Links). What applications are allowed to access those objects (which applications are designated as authorized). What objects are allowed to be moved and copied to those applications (Smart Links). When you open a file you have the option to send smart links to other applications. If you check the "Send smart links to other applications" box, you will be able to send Smart Links. Additional xrefs can be added to an object. For example, if you add 10 additional references to a component in a drawing, it will be

---

sent to the same 10 applications when opening a drawing. The Standard XRef, Dynamic XRef, Dynamic Global XRef, Dynamic Linked XRef, and Dynamic X

Open the programme, click on Autodesk. When the programme start, click on Autocad > Autocad Resources. If this option is not active, activate it from here. Then select the option Autodesk Autocad > Download Autocad Resource Pack. You can also do this directly from the Autocad menu if you have a registered Autodesk Autocad. If the programme detects a new autocad resource, it will show a dialogue box like this one. To activate the resource, it is enough to click on OK. If you do not see

---

the dialogue box, it probably means that you have not registered Autodesk Autocad yet. You will see that the resource is active as soon as the dialogue box disappears. You can now use the application as usual.

Network News More than a year after establishing the Department of Veterans Affairs' National Center for Patient Safety, the White House on Monday released the center's first set of recommendations to improve how the U.S. health system treats veterans. "There are many complex issues and many challenges associated with the

---

unique demands of the veteran population,” said Dr. David Shulkin, the department’s undersecretary for health. “The recommendations provided in this document represent a comprehensive and innovative approach to addressing these issues and improving the health care experience for our veterans.” The National Center for Patient Safety, which was established by the president's 2014 executive order to improve the safety of the nation's veterans, will be releasing two further sets of recommendations over the next year. It also has hired a national

---

advisory council that includes top veterans and medical experts to advise the center on its work. The center has no direct connection to VA but rather will be working to improve safety in VA's hospitals, clinics and in community-based care. The center will be working across the federal government, including partnering with the Centers for Disease Control and Prevention, the Health Resources and Services Administration and the National Institutes of Health to improve safety. Shulkin said there are "many causes of error in the health care system, including an inherently complex,

---

fast-paced and demanding work environment, distracted physicians and other care team members and widespread care complexity. "We also believe that a lack of real-time, accurate and reliable data collection and analysis may have contributed to the recent rise in reported safety events," he said. A White
