Repairing All Drivers and Manually Install to Maintain System Stability The Maintainer (Dr. Web) 3/10/2011 4 minutes to read Contributors Comments Created by Techy Jelly, 22nd April 2010 - Ratings Ask Dr. Web Drivers can have problems; often they simply can not load. Not all features are supported on every OS. The best way to approach this is to start by checking with the manufacturer if your OS is listed. If it is, then consider their suggestions and plans. If your OS isn't listed you should do your best to check the compatibility list at manufacturers website before downloading. A: There are a few tools that come with Windows Vista and Windows 7 that may help you when installing your system drivers. These are: Win7: add current drivers to the device manager Win7: specify a compatibility test disc Win7: ask for help while installing drivers On Windows Vista you must use Device Manager to find and manage your drivers. Also, if you'd like to fix a driver that doesn't load, use Driver Repair A: Drivers fail. If one fails the system, it stops working. However, if you can locate and remove the driver(s) that are causing a problem you can end up with a more stable system. Windows offers a number of utilities that help with this. There are a couple tools that I have found to be useful in my experience. Windows Device Manager provides a device management view that allows you to see all the devices in the system that are connected to the computer. You can also see which drivers are loaded and what type of device they are for (motherboard, scanner, printer, video card, etc.). You can then drill down to see a specific device and see its properties (where it is located, what model it is, what vendor it is from, and what software it needs for proper operation). Windows 7 Device Manager has a scan button which will attempt to locate any problems with the system's drivers. The error messages it gives you allow you to fix the problem on the device level. The scan will not affect your computer at all unless it locates a specific device that it cannot fix. I found the Device Manager to be the best because it allows you to see the entire system, and you do not need to aa67ecbc25
