This website is a part of social network where all users come to talk about various topics. Create photos, virtual tours, 3d building models, interior design and make many things. Website is an online platform for every user and it's not just a way to chat. Create anything you want and share it to social networks.Gingivitis is a very common disease, affecting people at different stages of their life, from children to elderly. Gingivitis is manifested by the appearance of inflammation of the gums and early signs of periodontal disease. The signs of gingivitis are: bleeding from the gums, redness, swelling of the gum tissues, gums which have lost their normal color, or in case there is pain. The most common causes for gingivitis are insufficient oral hygiene procedures and diet. Oral hygiene is the first line of defense in gingivitis and is performed by brushing the teeth. If gingivitis is not cured in a short time and poor oral hygiene is continued, the inflammation will remain and the gums will ultimately develop into a periodontitis, a more advanced condition. The disease also threatens the bones surrounding the teeth as it can induce dental abscesses. In the long-term, once periodontal disease has begun, it does not go away even with proper oral hygiene and treatment. In order to treat gingivitis, it is necessary to remove the bacteria from the dental plaque formed on the teeth and gums and eliminate the inflammation. If gingivitis is left untreated, periodontitis will develop and worsen.Q: Animate the Icons on a GSP in Vaadin I have icons in my vaadin application: Icon myIcon = new ImageIcon(getClass().getResource("/assets/myicon.png")); IconGroup myGroup = new IconGroup("myGroup", myIcon); myGroup.addItem("myItem"); I want to animate this icon (or the group if I have to), but I don't want to write an ImageIcon subclass to display the animation. Is there any kind of API in vaadin to control and animate (or even better, have a gif-like animation?) A: I think a better approach to this would be to use CSS for this. So, create a CSS file in your theme
