AutoCAD for Raster Graphics AutoCAD for Raster Graphics is designed to automate the production of two-dimensional (2D) maps and orthophotos. It is only compatible with maps and orthophotos created with

---

AutoCAD. AutoCAD for Raster Graphics runs on a Windows operating system. The AutoCAD® for Raster Graphics toolset includes:

- Raster Graphics for AutoCAD®, which enables you to import and edit 2D map and orthophoto data.
- Application Snapshot, which compiles all the settings and data for each edition, project, and file,

---

so they can be reused. • Application Studio, which provides an easy way to start and manage projects. • Capture Pro, which lets you capture the screen, and outputs the data to an existing drawing. • Editor Pro, which lets you edit the map and orthophoto data in the drawing. • Map Options, which allows you to customize the

---

appearance of the maps, labels, grids, and other map data. The application contains two components:

- The Raster Graphics Toolbar, which appears on the drawing canvas when you open a new project. It allows you to import data, create a custom map and orthophoto, edit data, and display it.
- The Raster Graphics Editor, which appears in the drawing's

---

header when you open a project. It allows you to import, edit, and display your data. The following table provides a description of the various features and components of AutoCAD for Raster Graphics. AutoCAD for Raster Graphics Features and Components

AutoCAD LT 2010 and AutoCAD LT 2011 can be installed on Windows 64-bit machines, but there are no 64-bit tools to open or save native 64-bit AutoCAD LT drawings. AutoCAD also works in Wine, so it can be installed on older Linux distributions. For Linux

distributions that have run into compatibility issues with Microsoft Windows (including the distribution maintainer's own programs), there are several third-party applications that will enable the user to run AutoCAD on Linux. These include Crossover Office, WINE, PlayOnLinux, and the Valve Hammer Editor. Mac OS X 10.7 or later,

macOS Sierra, macOS High Sierra and macOS Mojave are supported. AutoCAD LT 2009 and newer can be installed on Macs running older versions of the operating system. Exporting and importing from other CAD systems In addition to CAD files, AutoCAD can export to PDF, DWG, DXF, JPG, PNG, DWG, DXF, BMP, TIFF, and Web formats

Simplify your data queries. Easily find specific data and data values using several new graph-based query operators. (video: 2:01 min.) Connect data. Create dynamic annotation points based on specific data values. Annotation points can be connected or disconnected with multiple CAD objects, and can be added to viewports and drawings.

---

(video: 2:51 min.) Create dynamic annotation boxes. Quickly create and update two-dimensional annotation boxes with new shapes and attributes. Create annotation boxes based on specific data values and dynamically resize them. (video: 2:02 min.) Create dynamic annotation 3D models. Create and update 3D models that are linked to

---

specific data values. 3D models can be added to the XYZ viewport, assigned to viewports and drawings, and have new properties. (video: 2:17 min.) Add and adjust markers and dimensions. Quickly add or adjust markers, dimensions, and annotation text with new properties. Edit any annotation to make changes in real time.

---

(video: 1:44 min.) Use annotations as filters. Quickly filter annotations and quickly create a second set of annotations based on a query that uses an annotation as the filter. Annotation filters can be created as filters and used within queries.

(video: 1:53 min.) Create custom presets. Organize and apply custom settings for annotating quickly.

---

Presets can be created in the drawing or sent to a presentation. (video: 2:08 min.) Group and sort annotations. Quickly group or sort annotations based on specific data values. Add groups to viewports, presentations, and drawings. Sort annotations based on a specific data value, and mark specific groups. (video: 2:15 min.) Get the context of a

---

drawing. Use context information to find annotations and groupings in drawings and presentations. (video: 2:26 min.) Create dynamic annotation categories. Quickly create and update annotation categories that are based on specific data values. Categories can be added to the XYZ viewport, assigned to viewports and drawings,

---

and have new properties.  
(video: 2:01 min.) Create dynamic labeling categories. Quickly create and update labeling categories that are based on specific data values. Categories can be added to the XYZ viewport, assigned to viewports and drawings, and
