As of release 2017 it supports the OpenGL graphics engine, OpenGL ES, OpenGL ES 2.0, OpenGL ES 3.0 and OpenGL 4.6. AutoCAD drawing objects can be manipulated in Photoshop, InDesign, Illustrator or SketchUp (see cross-platform), although a cross-platform 3D application that works with AutoCAD could not be found in 2017. CAD Data Viewer AutoCAD Data Viewer (ADV) is an add-on product that has been sold since AutoCAD R12.5. It lets users import and view CAD data files in DWG format. This has been replaced by the AutoCAD Application Data Module (ADM). The core product, called CAD Data Viewer (CDV), can import various file formats such as DXF, BMP, AutoCAD R16, DWG and PDF. It includes data viewer and data editor features, allowing users to view, annotate, edit and translate the CAD data. The data editor allows users to modify the geometrical representation of the CAD model (lines, polygons, circles, arcs, and splines), text, labels, and attributes. AutoCAD Data Viewer can be run either in the CAD application or as an external application. It is compatible with AutoCAD LT, AutoCAD R13, AutoCAD LT R13,

Q: How do I convert a DateTime to a UNIX Timestamp in C#? I have a timestamp that is in DateTime format, but I want to convert it into Unix Timestamp so that I can sort by it on SQL Server. I have tried doing `DateTime.ToUniversalTime()`, but that did not work. How do I go about doing this?

A: You can just use `DateTime.ToUniversalTime()` for that.

A: What is the format of the timestamp you have? Does it contain milliseconds? If so, just add `DateTime.Millisecond`, Then convert to int with `(int)(long)(dateTime)` You can then subtract to get the Unix timestamp.

Q: SharePoint 2013 Workflows, Retry only one time I've developed a process which I'm executing through workflow in SharePoint 2013. It's an approval process and I'm checking for a number of different items in different areas. Each workflow step is checked and if the step fails, the workflow will continue until it's completed. However, I need to only retry the workflow one time. If the step fails, and the process has already continued to the next step, then don't start over again. So what I need to do is... If the step is a workflow step, check that it has already completed, and that the workflow has already completed If the step is a workflow step, start the workflow If the step is not a workflow step, and the workflow has not completed, start the workflow The only option I can think of is to add a flag somewhere that gets set to true when the workflow has completed,
