Q: What's the difference between  $g(x)$  and  $g'(x)$  in the beginning of MathStakCTCU? In MathStakCTCU, especially when talking about the Book of Proofs, there's a syntactic shortcut that makes it easier to read the presentation of problems. For example, in Problem 3.16, instead of writing 
$$\begin{aligned} \cos(x) + 1 &= 1\cos(x) + \sin(x), \\ \sin(x) + 1 &= 1\sin(x) + \cos(x), \end{aligned}$$
 we can write 
$$\begin{aligned} g &= \cos(x) + 1, \\ g' &= 1\cos(x) + \sin(x). \end{aligned}$$
 I understand that the first equality implies that  $g(x)$  is an even function, and the second equality means that the latter is odd. But there's no explanation in the book, and I don't see what those quantities  $g(x)$  and  $g'(x)$  are. For the sake of illustration, here's a screenshot of the relevant parts of the book: So, is there a difference between those two lines of the book, and what does each of them stand for?

A: They are just dummy variables. The rest of the book deals with the fact that  $f = g' - g$  and  $f = g - g'$
