---

What does the port number specify? A: It is an HTTP GET request that is used to retrieve a resource from the local computer. As you can see from the request, the name of the resource is /hash/.

---

The port number is 80 and is used for HTTP GET requests. Since you're using bash scripting, the user is probably running this script on a server, so you would connect to the server using the port 80 (HTTP GET) to retrieve

---

the file. The field of  
this invention  
relates to  
continuous casting  
of metal. More  
particularly, this  
invention relates  
to continuous  
casting of molten  
steel at high  
throughput rates in  
which a molten  
metal stream

---

containing solid  
particulate metal is  
continuously cast  
into a casting mold  
as liquid flowable  
metal travels  
downwardly and  
forwardly through  
a continuous  
casting mold  
forming trough.  
The continuously  
cast metal is

---

solidified against  
the sides of the  
trough. Heretofore,  
continuous casting  
of molten metal  
has been  
accomplished by  
pouring the molten  
metal into a  
continuous casting  
mold formed by a  
pattern of traveling  
water cooled metal

---

solidifying against  
a water cooled  
mold surface. The  
mold is lined with  
solidified metal on  
the mold surface  
to ensure  
solidification of the  
poured molten  
metal. In order to  
maintain the  
molten metal  
stream in a flowing

---

condition within the continuous casting mold, a porous mold which is water cooled on its interior surface is utilized. The porosity of the water cooled mold assures that the molten metal stream is fluidized as it flows

---

downwardly and forwardly through the mold. In order to lower the casting cost of continuously cast metal, it is desirable to continuously cast molten metal at as high of a throughput as is economically

---

feasible.  
Heretofore, it has not been possible to achieve maximum casting throughput or efficiency due to an inability to minimize the air content within the continuous casting mold which prevents

---

maximum metal  
flow into the mold.  
Heretofore, when  
casting of molten  
metal occurs in  
high speed  
continuous casting  
systems in which  
molten metal is  
poured into a  
traveling  
continuous casting  
mold, the metal

---

impinges directly  
against the  
solidified metal  
mold surface. The  
casting surface is  
cooled such that  
metal which  
contacts this  
cooling surface  
solidifies from the  
heat of the metal  
to the extent that  
the contacting

---

metal is substantially solidified before it is fully cooled on the mold surface.

When casting occurs in such a continuous casting system, as the molten metal stream contacts the mold surface, the solidified metal

---

is molten as a  
result of the heat  
released in  
solidifying the  
contacting metal.
