Equipped with available twin-cylinder engine, and a 550-horsepower powerplant, the X-Bow GTi is set to take on the world. In the category of crazy, there are only two MotoGP riders who, when it comes to the history of motorcycle racing, defy descriptions - good and bad. They are Michael Fish and Ronnie Peterson. Here is a selection of their craziest stories. We are fully aware that motorcycles, despite their class as an exclusive means of travel, are often not a popular form of transport in areas of the world where millions of people must live and work. So, we've decided to show off why these three models of motorcycle are so popular in places they would never ordinarily be seen. Energy yield of aerobic respiration in noncompetitive insect flight muscle, locusts. Using physiological measurements, we show that the energy yield of aerobic respiration, the sum of the production of ATP and the reduction of oxygen in flight muscles, is similar in mitochondria isolated from flight muscles of nine species of winged insects. This mitochondrial energy yield, measured in a purified preparation of mitochondria, varied from a minimum of 6.6 +/- 2.2 nmol O2/min/mg mitochondrial protein (N = 3) to a maximum of 10.5 +/- 2.1 nmol O2/min/mg mitochondrial protein (N = 4). Thus, there are no significant interspecific variations in the mitochondrial energy yield. The minimum mitochondrial energy yield in mitochondria from flight muscles is the
