The driver for your chipset is on the motherboard. The chipset and the driver are listed on the motherboard or manual. The video chipset is also referred to as "display controller", "video or display adapter", or. They already knew how to drive fast. In the days following the test, the scientists looked for patterns of activity that would allow them to read the pilot's headspace. They were particularly interested in the sense of sight. If the driver became aware that he was in trouble, was he directing his eyes to the instrument panel to grab the controls? Or was the problem the result of lack of focus — a distraction he had to deal with by looking away? After 10 minutes on the ice, the pilot began to suspect he was in trouble. His eyes began to stray — and when they did, he looked up, the scientist noted. It wasn't until after that he'd noticed, at 150 feet above the surface, the patch of white. "The police officer had found the body and the pilot was dead," said Dr. Greg Metcalf, a psychologist at the Royal Military College of Canada who worked on the study. "The question is whether he was in a state of mind to allow for a rescue." The study, published Wednesday in the journal Aviation, Space and Environmental Medicine, found that when pilots — and road drivers anticipate a crash, they are unconsciously more focused on the task at hand than on potential dangers. But when the crash becomes a reality, the kind of motor skills and caution needed to respond to sudden dangers take over. Read the original article.Vincent P.
